## **Executive summary**

Acetochlor is mainly used to control weeds in the fields of corn, soybean, peanut and other crops in China. As of 8 Sept., 2022, the number of registrations of acetochlor in China increased to 688, including 29 registration entries for acetochlor technical, 250 for single formulations and 409 for mixed formulations.

### - Production

In recent years, acetochlor industry in China has experienced overcapacity. In 2022, domestic capacity of acetochlor technical is 89,000 t/a; the output is expected to stand at 25,600 tonnes, or 23,552 tonnes (100% AI volume). It is unlikely to see a capacity expansion of acetochlor technical in China in the next five years, and the capacity may even go down further in the long run.

### - Export

According to export data of acetochlor technical and formulations updated by Tranalysis on 29 Sept., 2022, some 1,800 tonnes, or 1,636 tonnes (100% AI volume) of acetochlor products were exported to Vietnam, Pakistan, the US, Mexico, Nigeria, Thailand, Chile and Tanzania in H1 2022. Of these countries, Vietnam was the largest export destination.

### - Consumption

Acetochlor can be used for pre-emergent control of annual weeds and some broadleaf weeds. In 2022, the apparent consumption (calculated by 100% AI, the same below) is estimated at about 16,170 tonnes, down by some 1.20% year on year, and the actual consumption of acetochlor technical at about 16,190 tonnes. In 2022, corn, soybean and vegetables will remain the top three major end users of acetochlor, estimatedly accounting for about 53%, 16%, 7%, respectively. Currently, 50% EC and 90% EC are the major acetochlor single formulations applied in China; mixed formulations of acetochlor with bensulfuron-methyl, prometryn or 2,4-D butylate are also popular in domestic market.

It is estimated that the supply and demand of acetochlor technical in China will go down. Domestic demand for acetochlor technical may decrease from 2023 for reduced unit consumption of pesticides on crops and competition from its substitutes.

## **Methodology and source**

This report is drafted by diverse methods as follows:

### **Desk research**

The sources of desk research are various, including published journals, government statistics, industrial statistics, customs statistics, as well as information from the Internet. Information obtained has been compiled and analysed. When necessary, checks will be made with players in China's acetochlor industry regarding market information such as key producers, production situation, and trend of product price.

### **Telephone interview**

Extensive telephone interviews have been carried out in order to grasp the actual market situation of acetochlor in China.

Interviewees cover:

- Producers
- Traders

### **Internet search**

CCM contacted with the players in the acetochlor industry through B2B websites and software.

### **Data processing and presentation**

The data collected and compiled were sourced from:

- Published articles from periodicals, magazines and journals
- Statistics from local governments and international institutes
- Telephone interviews with domestic suppliers, traders, industrial experts
- Third-party data providers
- Information from the Internet

Data obtained from various sources have been combined and cross-checked to make this report as precise and scientific as possible. Throughout the process, a series of internal discussions were made in order to analyse the data and have conclusions drawn.

### **Abbreviation**

AI: active ingredient

EC: emulsifiable concentrate

EW: emulsion oil in water

OD: oil dispersion

SC: suspension concentrate

SE: suspo-emulsion

TC: technical material

WP: wettable powder

CAGR: compound annual growth rate

CCPIA: China Crop Protection Industry Association

ICAMA: Institute for the Control of Agrochemicals, Ministry of Agriculture and Rural Affairs of the People's Republic of China

## Unit

Tonne: equals to metric ton in this report

/t: per tonne

t/a: tonne/annum, tonne per year

USD: US dollar, currency unit in the US

RMB: currency unit in China, also named yuan

## 1 Industry overview

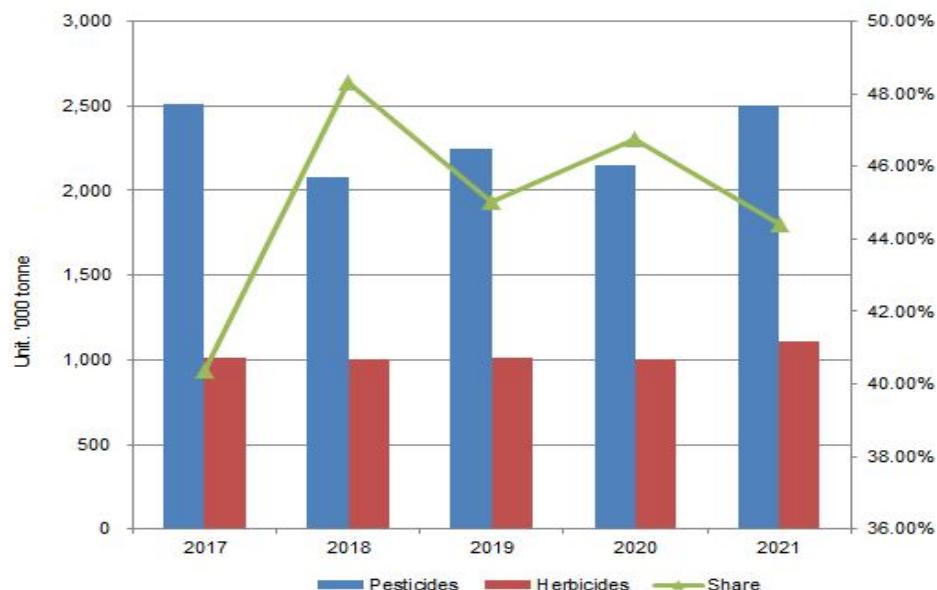

### 1.1 Brief introduction to pesticide industry in China

China is now the world's largest exporter of pesticides, and herbicide is an important pesticide category. In recent years, amid rising labor cost as well as the pursuit of higher efficiency and cost-effectiveness, herbicides have been widely used in agricultural production. However, the abuse of herbicides can easily lead to deterioration of ecological environment and soil fertility. Therefore, in recent years, multiple environmental protection policies have been rolled out and the output of herbicides in China showed a general downward trend. But in 2021, China's herbicide output resumed growth, standing at 1,109,000 tonnes (converted to 100% technical, the same below) and increasing by 10.46% year on year.

In terms of export, in 2021 China exported 2,202,000 tonnes of pesticides, a year-on-year drop of 12.41%. Yet the export volume of herbicides in 2021 stood at 1,390,000 tonnes, up 12.46% year on year; and it accounts for more than 63% of total pesticide exports, the share nearly 14 percentage points higher than that in 2020. The total value of herbicide exports rocketed by some 60% year on year to USD4.9 billion.

With the structural adjustment of the pesticide industry and development of products with higher added value and efficacy, structure of pesticide output in China has improved. China's output proportion of herbicides showed a general uptrend in 2017–2020. In 2021, the proportion of herbicides (calculated by 100% technical) was around 44.40%, which means that herbicide still predominates in pesticides produced in China.

Figure 1.1-1 Output and share of herbicides in China's pesticide industry, 2017–2021

Note: All the volumes are calculated by 100% technical.

## 1.2 Position of acetochlor in China's herbicide industry

As a herbicide, acetochlor plays an important role in China's farming. It can be used for pre-emergent control of annual weeds and some broadleaf weeds in the fields of corn, cotton, peanut, soybean, etc. In 2021, acetochlor output made up 2.21% of the total herbicide output in China; in general, its share declined quickly during 2017–2021.

Table 1.2-1 Output volume and output share of acetochlor in herbicides industry in China, 2017–2021

Year	Herbicide output, tonne	Acetochlor output, tonne	Share
2017	1,012,000	32,844	3.25%
2018	1,006,000	27,968	2.78%
2019	1,011,000	24,748	2.45%
2020	1,004,000	26,220	2.61%
2021	1,109,000	24,564	2.21%

Note: The output is based on content of 100%.

## 2 Supply

### 2.1 Production technology

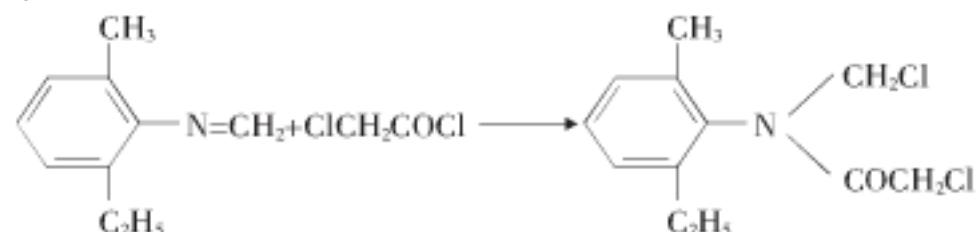

Currently, there are two main routes for producing acetochlor technical in China, namely the methylene route and the ether route. The former, which is listed and supported in the *Plan for Promotion of Cleaner Production Technology in the Pesticide Industry* issued by the Ministry of Industry and Information Technology of the People's Republic of China, is adopted by an increasing number of producers, while the latter is listed as a technology with serious pollution and high environmental risks.

## 2.2 Registration

Acetochlor is mainly used to control weeds in the fields of corn, soybean, peanut and other crops in China. As of 8 Sept., 2022, the number of registrations of acetochlor in China increased to 688 from 673 in Oct. 2021. And the number of registrations of acetochlor technical in China decreased to 29 from 30 in Oct. 2021. As for acetochlor formulations, there were 250 registration entries for single formulations and 409 for mixed formulations as of Sept. 2022, the amounts increasing slightly from the numbers registered in Oct., 2021.

Table 2.2-1 Registrations of acetochlor technical in China, as of 8 Sept., 2022

No.	Registration number	Content	Registrant	Expire date

### 2.3 Production, 2018–2022E

In recent years, acetochlor industry in China has experienced overcapacity—total capacity of acetochlor technical has remained much larger than the output. In 2022, domestic capacity of acetochlor technical is 89,000 t/a; the output is expected to stand at 25,600 tonnes, or 23,552 tonnes (100% AI volume), which means a decrease of 4.12% year on year.

During 2018–2021, some producers suspended their production. In 2019, Shandong Qiaochang Chemical Co., Ltd. and Jilin Jinqiu Pesticide Co., Ltd. (Jilin Jinqiu) suspended their production of acetochlor technical. In 2020, Jiangsu Lulilai Co., Ltd. stopped its production lines. In 2021, Zhongnongfa Henan Agrochemical Co., Ltd. (Henan Zhongnongfa), with 10,000 t/a capacity of acetochlor technical, suspended its production lines.

In 2022, Henan Zhongnongfa resumed operation of its production lines, and has become one of acetochlor technical suppliers to Jilin Jinqiu. It is worth noting that Jilin Jinqiu, with 3,000 t/a production capacity of acetochlor technical, has halted the lines in recent years, due to a lack of the intermediate 6-ethyl-o-toluidine (MEA), and an increase in production costs. Now it mainly focuses on the acetochlor formulation business.

### 3 Circulation

#### 3.1 Price, 2017–2022

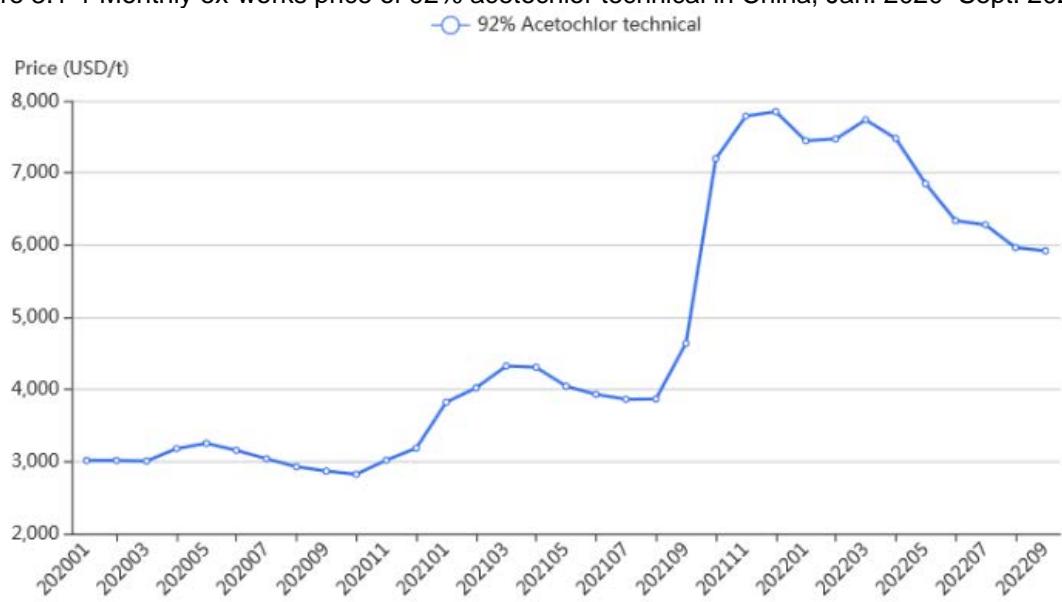

The annual ex-works price of acetochlor technical in China declined in 2019 and 2020, but it soared to USD4,972/t in 2021, up by over 60% year on year. Though the monthly ex-works price of acetochlor technical saw a decrease in 2022, the semi-annual ex-works price in H1 2022 still stood at a high level of USD7,221/t, and it is expected that the annual price in 2022 will be higher than that in 2021.

In 2022, the monthly price of acetochlor technical in China started with a month-on-month fall. Though it saw a slight increase from Feb. to March, the price continued to drop in Q2–Q3. In Sept., the price came to USD5,921/t, which still marks a 27.66% year-on-year jump. Some producers revealed that supply of the raw material MEA had been tight recently. That may prop up the price of acetochlor technical in Q4.

Reasons for the price drop in Q2–Q3 2022 are as follows:

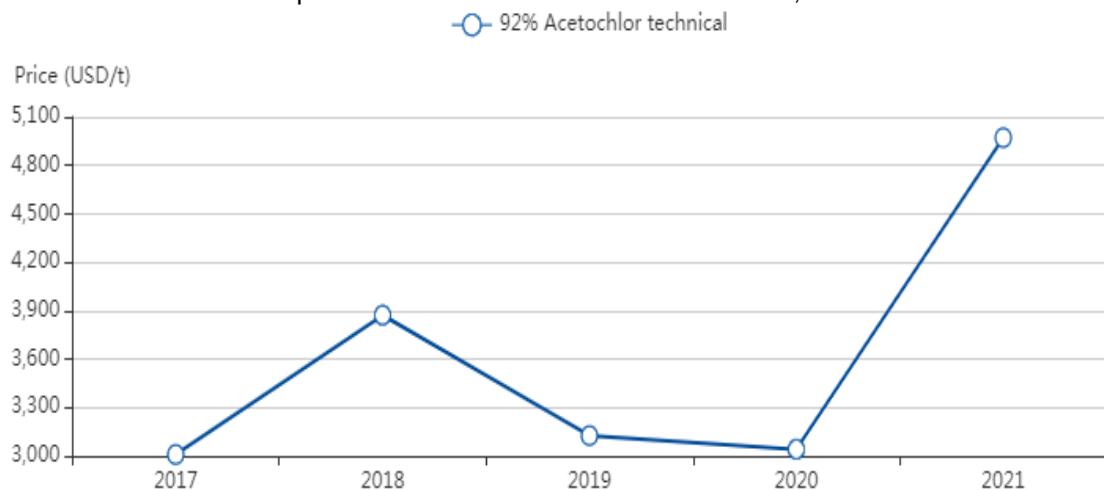

- The supply of acetochlor technical went up as some major manufacturers resumed production, such as Henan Zhongnongfa.
- In the low season from May to Aug., the price of acetochlor usually goes down in China.

### 3.2 Export, 2017–2020

#### 3.2.1 By month

According to the export data from Tranalysis, in 2020, China exported some 7,267 tonnes of acetochlor products. Major acetochlor products for export in 2020 were 50% EC, 90% EC, 92% TC, 93% TC, 95% TC and 97% TC.

Table 3.2.1-1 China's exports of acetochlor technical and formulations by month, 2020

#### 4 Consumption, 2018–2022E

Acetochlor can be used for pre-emergent control of annual weeds and some broadleaf weeds in the fields of corn, cotton, peanut, soybean, etc. In 2022, the apparent consumption (calculated by 100% AI, the same below) is estimated at about 16,172 tonnes, down 1.17% year on year; the actual consumption of acetochlor technical will be about 16,188 tonnes.

During 2018–2022, the apparent consumption of acetochlor technical showed a general downward trend. Policies on cutting down unit consumption of pesticides should be the main reason. Since 2015, the Ministry of Agriculture and Rural Affairs of the People's Republic of China has pushed forward the zero-growth campaign for the use of chemical fertilizers and pesticides. Statistics show that pesticide utilization rate on rice, wheat and corn in China averaged 40.60% in 2020, up about 4% compared with that in 2015.

In 2022, corn, soybean and vegetables will remain the top three major end users of acetochlor, estimatedly accounting for about 53.34%, 16.07%, 7.26%, respectively. Currently, 50% EC and 90% EC are the major types of acetochlor single formulations applied in China; mixed formulations of acetochlor with bensulfuron-methyl, prometryn or 2,4-D butylate are also popular in domestic market.

Table 4-1 Apparent consumption of acetochlor technical in China, 2018–2022E

Year	Output (calculated by 92% technical), tonne	Output (calculated by 100% AI), tonne	Export (calculated by 100% AI), tonne	Apparent consumption (calculated by 100% AI), tonne
2018	30,400	27,968	11,423	16,545
2019	26,900	24,748	8,218	16,530
2020	28,500	26,220	9,672	16,548
2021	26,700	24,564	8,200	16,364
2022E	25,600	23,552	7,380	16,172

Note: The export volume in 2020–2022 is estimated according to the actual consumption, output and stock evaluation.

## 5 Outlook, 2023–2027

In 2022, total capacity of acetochlor technical in China is 89,000 t/a, and the output is expected to be about 25,600 tonnes. From 2018 to 2022, the capacity in China has been in the decline in general, echoed by gradually shrinking domestic demand for acetochlor technical. China's acetochlor industry has seen some setbacks in this period.

The output of acetochlor technical in China is estimated to go down in 2023–2027, mainly due to the decreasing domestic and overseas demand. Recently, some provinces have imposed strict requirements and restrictions on new production capacity for acetochlor. On 24 Jan. 2022, the Shandong Provincial Department of Agriculture and Rural Affairs issued the *Notice on Further Strengthening the Management of Pesticide Production*, proposing that new production equipment for acetochlor (excluding the methylene method) shall not be built. Besides, transfer of production equipment for acetochlor (excluding the methylene method) to Henan Province has been prohibited in accordance with the "*Banned, Restricted, and Controlled Catalogue for Chemical Industrial Transfers to Henan Province*", issued by Henan Provincial Development and Reform Commission. It is unlikely to see an increase in the capacity of acetochlor technical in China in the next five years (2023–2027); the capacity may even go down further in the long run.

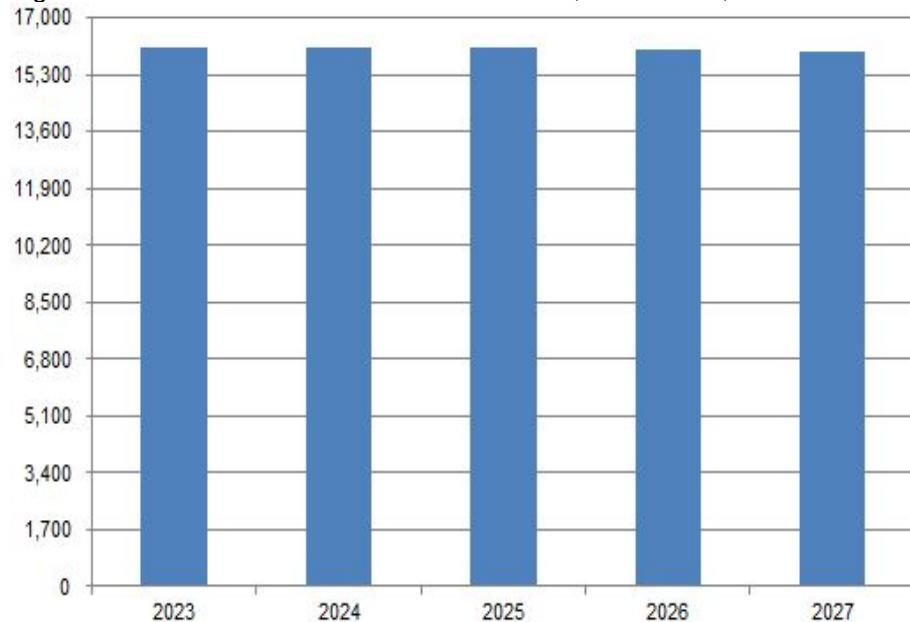

Besides, domestic demand for acetochlor technical may also decrease in 2023–2027. That's mainly because cutting down on unit consumption of pesticides on crops has become mainstream in China these years. Moreover, competition from its substitutes, such as metolachlor technical, is a concern. Therefore, it is estimated that the supply and demand of acetochlor technical in China will go down from 2023.
